What People Say About Jim2® Business Engine

Software for *Life*

Jim2 Business Engine combines Accounting, Workflow and Business Process Management Software into one integrated package.

Thousands of Australians are using Jim2 in industries such as IT, Managed Print Services, Agriculture, Safety, Marine, Apparel, Distribution, Warehousing, Retailing, Engineering, Hire & Sales, Manufacturing, Sub-contractor and Import/Export operations.

"Visibility is invaluable. Now admin's done onsite, we don't have the risk of paper being lost. Every detail is organised, and jobs are flagged with a status, which is huge for us. We have a large amount of jobs on the run at any one time, and now we know exactly where each job is at."

JAMES SIMPSON-LEE
MANAGING DIRECTOR
WATERMATIC IRRIGATION
(SYDNEY, NSW)

Stewart Orchard, Managing Director, Wallboard Tool Company Pty Ltd (Gold Coast, QLD):

"The biggest saving for Wallboard is that when we made the decision to move from min/max to utilising Stock Procurement (basing stock levels on daily sales – average days' supply) we were able to reduce our inventory by half and still maintain same day shipping, without missing a beat. This is across 4 warehouses, millions of dollars of stock value, 2,500 SKU's."

Gerry See, CEO NAK Hair (Brisbane, Qld):

"The way Jim2 works is unique. We just didn't know what we were missing out on until we saw the system in action. It was like removing dust from the lens of a camera – we now had perfect 20/20 vision of our operations. We could look into all our warehouses simultaneously and see our stock holdings, sales information, and recalculate our foreign currency exposure in an instant."

Isaac Edmiston, Director of Sales and Marketing, Norweld Australia (Cairns, QLD)

"As our offices are located along the east coast of Australia, the ability to travel and access Jim2, provided we have an internet connection, is one of the major benefits of Jim2.Cloud. It has been instrumental with the establishment of new satellite operations, as we can operate in an office environment if we have an internet connection. Coupled with minimal potential impact of digital security threats, Jim2.Cloud is the best solution for anyone looking to utilise Jim2 in their business."

Martyn Windeyer, Director, Windeyer Continuous Hinges Pty Ltd (Minto, NSW)

"By recording our production-related processes, stock, programmes and documents when first setting up a manufacturing item in Jim2, we can reproduce our manufacturing jobs at the click of a button, which has saved us so much time.

"Add to that the functionality to link drawings and documents to our manufacturing parts, and the ability to manage workflow by job status, the new workflow has been key to finishing jobs faster, and invoicing sooner."

Michelle Cornick, General Manager, Redfox Corporation Pty Ltd (Mackay, QLD)

"With a background as a Chartered Accountant, Jim2 gives me 100% confidence in everything that is reported, which is rare when it comes to software packages. Jim2's ability far exceeds any other software package I have used or seen."

Jim2®
BUSINESS ENGINE

Designed, Developed & Supported in Australia, Jim2® Business Engine is a complete business solution to manage every aspect of your workflow cycle and solves the growing pains of small to midsize enterprises.

Key Benefits

- One powerful, easy-to-use software package
- Support, training and intuitive user interface means a short learning curve for staff
- Improved business processes
- Increased communication and traceability
- Simple implementation process

Kerrie Richardson, Director, Brandworx Australia (Wollongong, NSW):

"The program looked impressive and we were excited at the prospect of the immediate and up-to-date information that Jim2 produced for our business.

"I particularly liked the idea of being able to run Job lists to be able to see the exact progress of the jobs, and when they are due. I also liked the profit report that could be run for each job.

"After using Jim2 Business Engine for a while we discovered all the different ways to run reports. We have just started using the Dashboard, and are starting to experiment with labour on each job."

Sandra Hill, Director, Central Communications Pty Ltd (Alice Springs, NT):

"Jim2 is a total business management solution. It gave us the ability to review live profits and losses, and to drill down to any level of any job to see if it went well or poorly. Jim2 can also manage point of sale and stock inventory management, providing full control for all of our projects – basically Jim2 helps us manage everything that Central Communications does on a daily basis."

Carmel Pasma, Operations Manager, Pasma Electrical (Cairns, QLD):

"The greatest benefit we found is the time saved when accessing data. The card file has all information at our fingertips. Profit and loss is all there. Jobs to quotes to purchases is all there, quickly and easily accessed. I am very happy with Jim2 and would highly recommend it to other businesses."

Elena Gosse, Executive Director, Australian Innovative Systems Pty Ltd (Brisbane, QLD):

"Jim2 works alongside our strategy, helping me save time on administration, and concentrate on winning new business overseas!

"If there was a mistake in the old system, we just didn't know where the problem started. Our previous software couldn't provide us with a real window into our business. We could not see who was doing what and how. Our old system was weak when it came to manufacturing capabilities.

"The multicurrency feature is so important for our invoicing. With the previous system I was usually hesitant to allow staff to invoice overseas customers while I was on business trips. Now, with Jim2 I trust that the invoicing is accurate."

Darryl Anderson, Managing Director, IBS Engineering Supplies & Innovative Solutions (Innisfail, QLD):

"Being able to easily navigate through the software and figure out where jobs need to be actioned or where issues may lie, and then being able to delegate actions right from within the software and have traceability to resolutions has been invaluable. The integration of email has meant that our external communication has improved in much the same way."
