Jim2™ eBusiness Connect
Jim2® Business Engine

Fact Sheet

Quick Facts

Happen Business, developers of Jim2 Business Engine Accounting software, offer all small to medium businesses affordable eBusiness functionality within their accounting system.

Jim2 reduces your administration time by incorporating all your purchasing/ordering functions into your business system.

Jim2 gives you full visibility into your suppliers' warehouses. See what's in stock, which warehouse it's in, how many are in the warehouse, and what is on backorder.

Your business can place electronic purchase orders with your suppliers through your accounting system.

No more double entry, no more re-keying, less clerical errors and one system that records **all** your business activities – in real time.

What is Jim2® eBusiness Connect?

Jim2 eBusiness Connect is an *optional* part of Jim2 Business Engine. This enhancement to Jim2 links your back end business system with your supplier's warehouse.

Jim2 eBusiness Connect allows you to electronically view your supplier's warehouse on-screen.

This means all stock enquiries (including price, description, images and availability), and all ordering of stock with your supplier can be done **through your accounting system**.

Jim2 replaces your fax orders, your price lists, the endless phone calls and on-hold waiting with suppliers by giving you instant access to their warehouse information.
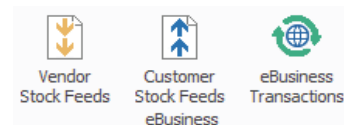

What benefits will this bring to my business?

•   You now have a **virtual warehouse** at your fingertips. For example, you may have 5 in stock, and your 'virtual warehouse' has 25 in stock.

•   Jim2 provides you with instant, up-to-date product information, such as stock prices and availability, with all information within your backend system (Jim2) for immediate use by all staff for quoting, selling and ordering. This provides better customer service and increased sales opportunities.

•   Dramatically reduce administration costs by improving business processes and streamlining of existing procedures.

•   Jim2 eBusiness Connect lets your business conduct business electronically at an affordable price, giving you the same advantages and functionality that much larger businesses enjoy using expensive, high-end business systems.

## Making it easy to trade electronically with your Suppliers through Jim2®

•   We've taken care of the technical details of making eBusiness work between your business and the suppliers you use every day.

•   We've taken the guesswork out of eBusiness by having **one system** that runs your accounts, your purchasing, searches for stock, and manages your price lists.

•   We help you make intelligent purchasing decisions by having all the important details at your fingertips – current stock, previous purchase history, and the availability of your supplier's stock in their warehouse.

•   No additional costs or reliance on middlemen for stock feeds.

•   All this functionality is completely unique in the Australian ERP/Accounting Software market – it's exclusive to Happen Business!

Jim2® eBusiness Connect in detail

Bringing in supplier stock feeds to Jim2 is easy.

•   Automated download of Supplier product info, pricing and availability into Jim2.

•   You can set rules to exclude the products you don't sell.

•   Set rules for default pricing for stock.

•   Set rules for updating/matching existing stock.

•   Jim2 allows long stock product descriptions.

•   Jim2 brings in images of products.

•   If product information changes from your supplier, Jim2 will automatically update this information so you have the most up to date stock info available – at all times.

•   You can link stock (we call it 'Related Stock') – extremely useful for linking the right consumables with the correct printer, for example.

Jim2 Electronic Purchase Order

- Place electronic purchase orders directly with your suppliers.
- Purchase orders are created from your business system, and can be linked with quotes and/or invoices. This ensures that you have billed customers for stock.
- Additional information can be specified within purchase order fields: allow part ship, invoice with goods, ship/courier

Multiple Suppliers' Stock Feeds

Jim2 supports multiple price feeds from Ingram Micro, Dickerdata, Edsys Computers, Ricoh and Dynamic Supplies.

All supplier stock can be easily searched and selected, and then converted, or linked to stock within Jim2. Supplier stock can then be used within quotes, jobs and purchase orders within Jim2.

Stock is created when required in Jim2, and purchase orders are created and sent to suppliers, both without re-keying.

At any time, you and your employees can see what's in stock, which warehouse it's at, and how many are available.

Jim2 eBusiness Connect is complemented by Jim2® eBusiness Supply, enabling suppliers to provide stock feeds and accept electronic purchase orders with members with minimal effort (Jim2 to Jim2).

What does the product information screen look like in Jim2® eBusiness Connect?

Stock information available within Jim2 Business Engine:

- Short Descriptions.
- Long Descriptions.
- Images of Stock.
- Availability.
- Related stock (eg. consumable and printer).
- Price change indicators (price drops, rises, EOL).

What does the Supplier Stock Feeds screen look like in Jim2® eBusiness Connect?

Summary

Immediate benefits to your business:

- Automatic stock feeds from suppliers, including price and availability.
- Quick and easy creation of supplier stock within Jim2.
