

Apply a Credit Card Charge Using Stock

This document will explain:

How to setup and use a stock record to calculate credit card charges on a job.

Add a Stock GL Group

- Go to Tools > Setups > Accounting > Stock GL Groups > Add
 - Type = Non Depleting, Journal
 - Name = Credit Card Fee
 - GL Account = It could be:
 - Income eg 4-7500 Credit Card Charge,
 - COGS eg 5-5100 Vendor Credit Charges or
 - Expense eg 6-1240 Credit Card Fees

| | | | |
|------------------|------------------------|------------------|--|
| Stock Type: | Non Depleting, Journal | | |
| Stock GL Group: | Credit Card Fee | | |
| Purchase GL Acc: | | | Asset - Normally 1xxxx Account |
| COGS GL Acc: | 61240 | Credit Card Fees | Cost Of Sales - Normally 5xxxx Account |
| Income GL Acc: | 61240 | Credit Card Fees | Income - Normally 4xxxx Account (or 2xxxx for Liability) |

NOTE: Perhaps check with your accountant as you may need to add a new GL account.

Add a Stock Record

- Code = CARD.FEE
- Type = Journal
- GL Group = Credit Card Fee
- Enter Description of your choice
- Tick I 'Sell in' and Tax = G

- On the Pricing Tab:
 - Add a price level
 - Select Price Calc Method = Fixed Price
 - Price Inc = 0.0309

| Price Level | Price Calc Method | Base PL | Tax | Pont % | Price Ex. | Price Inc. |
|-------------|-------------------|---------|-----|--------|------------|------------|
| ↳ Retail | Fixed Price | | G | 0 | 0.0281 ... | 0.0309 |

NOTE 1: This setup is for 3% of the Total Invoice Price inc GST. You will have to calculate the value for other % rates.

NOTE 2: There is a slight rounding issue that may become apparent on large invoices – there is no way around this except to override the Price Ex or Price Inc as appropriate.

- On the Details tab, change the Decimal places to:
 - Qty = 2
 - Sell price = 4

Add a Job and complete the Sale

- Check the Total sale value

| + | Status | Stock Code | Description | Unit | Order | Supply | B. Ord | Price Ex. | Price Inc. | Tax | Hide | Total |
|---|--------|------------|---|------|-------|--------|--------|-----------|------------|-----|--------------------------|--------|
| 1 | | WIDGET.2 | Widget 2 | UNIT | 1 | 1 | 0 | 20.00 | 22.00 | G | <input type="checkbox"/> | 22.00 |
| 2 | | CARD.FEE | Credit Card surcharge of 3% on Total invoice price. | UNIT | 0 | | 0.0 | 0.0281 | 0.0309 | G | <input type="checkbox"/> | 0.0000 |

| | | | | | | |
|--------------|----------------|--------|------|--------------|----------------|---------|
| Create Quote | Create Similar | Cancel | Save | Save & Close | SubTotal \$ | 20.0000 |
| | | | | | Tax \$ | 2.0000 |
| | | | | | Total \$ (AUD) | 22.0000 |

- Add the Stock CARD.FEE then change the Order Qty to equal the original job Total

| + | Status | Stock Code | Description | Unit | Order | Supply | B. Ord | Price Ex. | Price Inc. | Tax | Hide | Total |
|---|--------|------------|---|------|-------|--------|--------|-----------|------------|-----|--------------------------|--------|
| 1 | | WIDGET.2 | Widget 2 | UNIT | 1 | 1 | 0 | 20.00 | 22.00 | G | <input type="checkbox"/> | 22.00 |
| 2 | | CARD.FEE | Credit Card surcharge of 3% on Total invoice price. | UNIT | 22 | 22 | 0.0 | 0.0281 | 0.0309 | G | <input type="checkbox"/> | 0.6798 |

| | | | | | | |
|--------------|----------------|--------|------|--------------|----------------|---------|
| Create Quote | Create Similar | Cancel | Save | Save & Close | SubTotal \$ | 20.6780 |
| | | | | | Tax \$ | 2.0000 |
| | | | | | Total \$ (AUD) | 22.6780 |

- In this example, the Total Sale before adding the CARD.FEE was \$22.00 therefore 62 cents plus GST is added to the Total after adding an Order Qty of 22.00
- Invoice the job
- You can see that 0.62 cents net ex GST has gone to the appropriate Card Fee account and 0.06 cents has been added to the GST Collected account.

| Tran# | Inv, Date | Invoice# | TCGP | Job# |
